## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments filed 7-14-2005 have been fully considered but they are not persuasive.

Applicant assert that the cited prior art reference (US 5,351,245) teaches the number of radio frames of a logical to be two in either data rate, as opposed to the number of radio frames of a logical channel is determined according the transmission rate of the physical channel in the case of the present invention. However, the cited prior art reference shows 4 radio frame in the category of RCH "logical channel" at one transmission rate and 2 radio frames at another transmission rate, reading the claimed invention. In other words, since applicant fails to define or distinguish "a logical channel" recited in the claim, a channel represented by the RCH radio frames in the prior art reads on the "logical channel" and the logical channel has a different number of radio frames depending on a transmission rate, as explained below.

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Pregont et al (US 5,351,245).

#### **Claims 1 and 4.**

Pregont et al discloses a communication apparatus and method (see Fig.1) comprising;

means for determining the number of radio frames on a physical channel based on the transmission rate of the physical channel, where the radio frame constitute a unit by which a logical channel is carried out, see Fig.2 and col. 2, line 56- col.3, line 59

Art Unit: 2638

describing RCH (i.e., a logical channel) is given four frames at the full transmission rate of the physical channel and two frame at the half transmission rate,

means for mapping the logical channel into the physical channel (115) and

means for transmitting a signal of the logical channel over the physical channel

(109).

**Claims 2,3,5 and 6.**

Pregont et al discloses generating the signal of the logical channel by adding an error correcting code, specifically CRC, on a unit by unit basis. See Fig.3A illustrating CRC coding.

***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
